NOTE: Even after its experience of nearly a century, Case is not content to publish advertisements unless besed on the very latest authoritative information. This is one of a series of messages to farmers prepared after visiting tractor demonstrations, talking to hundreds of farmers and carrying on a national investigation through our sales organization and by mail to find the gas tractor needs of the farmers.

or

Hard Work and Easier Work and **Average Crops** Larger Yields?

"One of the most important reasons for a greater use of farm tractors," says R. C. Nichol, of Kansas, in The American Thresherman, "is the increased yield that may be obtained by their use. This is, unfortunately, a point that is too often overlooked by farmers who are considering the purchase of an engine. To get away from the puzzling help question and to adopt a cheaper method of field preparation than by animals, is all right. But it is only one angle. Increased yields is what makes money. Deep plowing at the exact time is necessary—as is possible with a Case tractor. With horses and men, a farmer is too dependent on physical capacity. But with a Case tractor, fewer men are needed, and deeper plowing can be done. This tends largely to increase crop yields. All the foremost experts, such as Prof. L. E. Call, of Kansas, have proved it. Most farmers want to plow deeply and at the right time. Yet so far it has been nearly impossible.

How to Increase Your Profits

With the Case tractor-there's one for different sized farms-farmers can now make their farms pay more. Wages for men can be lessened. Fewer hungry horses are needed. More work can be done at any given time than ever before for a Case tractor never wearies. It can be kept at work continuously, without sleeping or resting or eating. When idle is the winter it costs neither care nor money.

Not a Tin Animal

Case tractors are real units of resourceful power, adaptable to all kinds of farm work. Their motors, as well as every other hard, are made by Case trained workmen at the Case plants. So Case tractors are not brought piece by piece un the outside. Back of Case tractors is an experience in the farm field of 74 years. This is not a new concern with a new fangled tractor. Like other Case machinery, our tractors are designed with the utmost simplicity and freedom from complicated parts. Every part is accessible. Our new gas tractors are enjoying the same chylable reputation that has always belonged to Case steam rigs.

Why be Satisfied with Lesser Quality?

Case does no experimenting at the cost of its customers. As early as 1802-over 20 years ago-Care Engineers Easile the proneer pas tractor in America, these then, this Company has expended hundreds of thousands of its own dellars in experimental work, so that we can come to you now, as we have in the past, with a proven, dependable machine. Our chief tractor engineer con tributes to this advertisement the following:

Ten Construction Details in the Case 10-20

Larger shafts—all high carbon steel, heat treated. Also larger bearings litted channel frame specially braced and staved to prevent deflection. Ample cooling for motor by same type radiator as used on heavy-duty

Transmission graving completely housed and runs in an oil bath.

4. Transmission grating completely housed and runs in an oil bath.
5. Built pinion of steel, case hardened.
6. Next to built pinion is a high-duty Hyatt Roller Bearing.
7. Rear axie carried in cannon bearing provided with 3. Hyatt Roller Bearings. 1 of them being on each side of the drive wheel.

8. Extra bearing provided and located next to the belt pulley and clutch, which takes the strain due to pull of belt away from engine bearings.

9. Only one clutch is used for both operating in the belt or for traction.

10. Hitch is so arranged as to do away with all side draft. Kuch Case tructor in its class has its own special features.

"Not Too Small, Too Light, Too Cheap"

Whichever size of Case tractors is suitable for your farm, you can bank ou its being the best of its kind in the market, made bonestly and conscientiously, to uphold our name and fame. In the field and in our laboratories we have carried on tests, and we know from experience what is best to incorporate in a tractor. In its class, each Case tractor is a masterpiece, embodying alf the best features. Why be satisfied, then, with lesser quality? Why choose as your investment a tractor that has fewer years of experience behind it? Why buy a tractor except from a company long engaged in making agricultural machinery? To do otherwise is to take an unnecessary risk.

Where Case Triumphs

The Case 10-30 will replace more than five largest and handle three plaws with ease under ordinary conditions. It is adapted to all kinds of farm work—besides field work, it drives an IS such Case separator, operates a silo niler, haule to market, etc. Then remember, above all things, that the motor is a special Case design, built entirely by Case, not assembled. All parts of the motor are easily accessable, so no distancing in secessary for any odjustment. When, for instance, you have to take up main hearings or crank pin bearings, son do and hatre to remore the magnetic or the case shaft or the oil pump. Access is obtained by removing a simple cover to which nothing is attached. Remember, too, that all the working parts are enclosed or fully protected. Consider weight, and do not forget that the Case 10-20 weights less than any other tractur of equal capacity.

Recken the value of the drive wheel traveling on unplowed land in

Recken the value of the drive wheel traveling on amplowed land in stead of down in the furrow. If the wheel travels in the furrow a comparatively narrow wheel would have to be used. In our design we use a wheel 22 inches in width. If we used a wheel to travel in the furrow it would have to be only 14 inches. No our wheel is nearly 60% wider, which gives additional traction and decreases the pressure at the gra-out

Earthermore, with the wheel traveling on the land, as ours these, it is possible to begin plowing operations after a rain momer thus if the wheel was in the furrow, as the water stays in the furrow longer after a rain than it does on the unplowed land. Then, when you hear of some farner who has had trouble getting over soft apots or extra hard pulls, remember that the effer wheel on the Case tractor can be clutched in from the operator's sent and used as a driver for such emergencies.

SEND 3 TO DAY

Consider all these things, make comparisons, and you are bound to a decide that the Case 10-20 at 1800, f. o. b. Ractur, is cheaper than a those costing less. Especially when you remember the reputation of the company, our 41 branch houses and 9000 dealers. Write today for more information about the 10-20 and other Case tractors, tochiding the 12-25, 70-40 and 30-60, one of which will suit your needs.

Leaders in Other Lines of Agricultural Machinery

Case steam engines. Case threshing mechines, Case steam engines. Case automobiles, and eyery Case product is each a dominant factor in its own field. Write today for our complete Case Catalog. It is an album of information that should be under the reading lamp in every farm sitting room. It is beautifully printed, with many interesting scenes and reproductions in color. No farmer should miss having it. Especially when it costs you only one penny for a postal card to get it. Merely write, "Send me your general machinery catalog." It is Free!
